

Environmental Policy

Coiltech AB develops, manufactures and markets heat exchangers for air handling and heat recovery and coolers for industrial processes. This has to be performed in such a way that the environment is protected, energy and raw material is economically used and a durable development is promoted. The environmental work has to be characterised by a cyclic and comprehensive view, where technical possibilities, economical reasons and ecological motives are to be balanced.

To obtain this we will:

1. Reduce the external environmental impact by preventing pollution and by continuous improvements according to the stated goals of our established environmental system. These goals are settled according to the company's environmental declaration and aspects of considerable environmental impact.
2. Manage or exceed the demands of laws, regulations, directions, standards and other commitments.
3. Continuously qualify and motivate the staff, whose working tasks influence the company's environment, to carry out their work in a way safe to the environment.
4. Consider the environmental aspects when planning investments of products and services. If equivalent in all other aspects, we will recommend the products, processes and methods which are resulting in less impact on the environment.
5. Regularly supervise, assisted by environmental inspections, the effectiveness and function of the company's environmental system.
6. Act with openness regarding environmental issues, so that staff, customers and other parties will have a comprehensive environmental information.

The legal responsibility will lie on the Managing Director. Each manager of Coiltech AB is responsible for the implementation, performance and supervision of the environmental system.
